

Run the **Bridge-IT_Setup.exe** file. If you have User Account Control (UAC) turned on it may ask you whether you want to run the file. Select **“Yes”**.

This will display the dialogue box on the right. Before the main program can be installed, some prerequisites have to be installed first such as the database. These prerequisites are completely self-installing so simply select **“Next”**, read and confirm the license, and then press **“Next”** again.

You may need to wait a few minutes as your computer is configured so it is ready to install the main program.

Once the prerequisites are installed the following screen will appear. You don't need to change any of the defaults so just press the **“Next”** button twice and finally the **“Install”** button. The main program will now be configured on your computer after a minute or two. Once it's completed, press the **“Finish”** button and you'll see the Bridge-IT 60 Day Trial icon appearing on your desktop.

Double-click the icon to start the program and begin your 60-day evaluation of the software.

Please note: the first time you start the program it will take a moment to load the trial database. This is a once off procedure so the next time you start the program it will load more quickly.

If you have any trouble at all with installation or you would simply prefer us to do it for you please call us free on **0800 612 4875** and we'll be very happy to help.
